CHICAGO MSA
MARKET ADAPTER & EXECUTION STATUS

LLC portfolio identification by shared owner mailing address

Control	Value
Market	Chicago-Naperville-Elgin, IL-IN Metropolitan Statistical Area (CBSA 16980)
Boundary basis	U.S. Census Bureau / OMB July 2023 delineation
Governing specification	00_MASTER_SPECIFICATION/LLC_Portfolio_Identification_and_Mailing_Master_Specification.docx
Status date	August 28, 2026
Executed county adapters	Cook County and Kendall County, Illinois
Mailing status	RESEARCH ONLY — no Chicago record is approved for printing yet

1. Purpose and non-negotiable rule

This market adapter applies the generic master specification to Chicago and surrounding counties. It does not select multifamily parcels or require a unit-count threshold. Every parcel class remains in scope when the normalized legal owner name ends in LLC.

The portfolio correlation key is the owner mailing address—not the property/situs address.

A candidate portfolio exists only when the same normalized owner mailing address links at least two distinct LLC names and at least two distinct parcels. One outbound mail row is eventually produced per validated mailing address, after service-provider and postal suppressions.

2. Operating flow

Step	Stage	Requirement
1	Ingest all parcels	Retain parcel ID, legal owner, owner mailing address, situs, source year and row lineage.
2	Filter LLC owners	Normalize the legal owner and require an LLC suffix at the end of the name.
3	Normalize owner mailing address	Standardize street, city, state and ZIP. Never substitute the situs address.
4	Cluster	Group different LLCs by the normalized owner mailing address.
5	Qualify	Require 2+ distinct LLCs and 2+ distinct parcel IDs.
6	Suppress	Remove lawyers, registered agents, CPAs/accountants, filing services, C/O and other service addresses.
7	Postal validation	Run CASS/DPV and campaign suppressions before print authorization.
8	Mail	Create one deduplicated postcard row per validated owner mailing address.

3. Official market boundary

The July 2023 federal delineation contains 13 counties. Kenosha County, Wisconsin is part of the wider combined statistical area, not this MSA, and is therefore excluded from this adapter.

County	State	FIPS	Role
Cook	IL	17031	Central
DuPage	IL	17043	Central
Grundy	IL	17063	Outlying
McHenry	IL	17111	Central
Will	IL	17197	Central
DeKalb	IL	17037	Outlying
Kane	IL	17089	Central

Kendall	IL	17093	Central
Lake	IL	17097	Central
Jasper	IN	18073	Outlying
Lake	IN	18089	Central
Newton	IN	18111	Outlying
Porter	IN	18127	Central

4. County access findings

County access is uneven. Production work may use official bulk downloads or stable APIs. Interactive sites are not automatically scraped when terms prohibit extraction or when bulk authorization is unclear. Those counties remain visible in the source matrix with a specific acquisition action.

County	Status	Finding
Cook IL	Executed	Official Socrata API includes owner name, owner mailing address, situs and parcel ID. Publisher warns that owner/mailing fields are intermittently updated.
Kendall IL	Executed	Official live ArcGIS service exposes owner_name, owner_addr1/2, owner_csz, PIN and situs fields. Snapshot date is retained because the layer has no explicit tax year.
DuPage IL	Verified lead	Official ArcGIS parcel service exists; full real-estate database with billing fields is offered by purchase. Exact REST field coverage remains to be tested.
Lake IL	Blocked for automated extraction	The official tax-search site expressly prohibits mining/gathering/extraction. Use an authorized bulk request or FOIA route.
Kane IL	Blocked pending acquisition	County states that it has no open-data sharing policy and that GIS data can be acquired for a fee.
Will IL	Partial	Official parcel shapefile download is available; owner-mailing fields are not yet verified.
McHenry / DeKalb IL	Access test needed	Official interactive systems expose owner/assessment information; bulk endpoints and terms must be verified.
Grundy IL	Discovery pending	Official bulk owner-mail source has not yet been verified.
Porter IN	Freshness blocked	A public ArcGIS owner-mail layer exists but its name indicates a 2022 vintage, which is not current enough for a mailing campaign.
Lake / Jasper / Newton IN	Discovery pending	Official parcel/GIS routes exist; current bulk owner-mail schemas and terms remain to be verified.

5. Cook County adapter

Official dataset: Cook County Assessor — Parcel Addresses (Socrata dataset 3723-97qp). The source was checked on August 28, 2026 and reported tax year 2026 as its latest year.

Source field	Canonical use	Control
pin	parcel_id	14-digit parcel identifier
owner_address_name	legal_owner_raw	Owner mailing name; LLC-suffix filter source
owner_address_full/city/state/zip	owner mailing fields	Exclusive portfolio grouping source
prop_address_*	property address fields	Evidence and future mapping only
row_id	source_row_id	Audit lineage

The first run downloaded 71,356 source rows matching a server-side *LLC suffix query. After local normalization and removal of one record with no usable owner mailing street, 71,355 parcel rows remained. Grouping them by normalized owner mailing address produced 3,505 clusters meeting both thresholds.

Metric	Result	Interpretation
Source year	2026	Latest published year returned by the API
Eligible LLC parcel rows	71,355	All property classes; one source row per parcel
Qualifying address clusters	3,505	2+ distinct LLCs and 2+ distinct parcels
Largest raw cluster	70 LLCs	High-collision addresses require heightened service-provider review
Mail-ready rows	0	Service-provider and USPS gates have not yet been run

6. Kendall County adapter and partial-market merge

The official Kendall County live cadastral FeatureServer was queried on August 28, 2026. The service returned 5,045 owner names ending in LLC; 5,043 rows retained a usable owner mailing street. County-level grouping produced 110 qualifying address clusters.

Cook and Kendall parcel evidence was then regrouped together by the same normalized owner mailing address. The partial MSA contains 3,627 qualifying clusters, including 25 addresses that link qualifying parcel evidence across both counties. This is partial coverage only; it is not represented as a completed 13-county market.

Metric	Result	Control
Kendall LLC parcels	5,043	All parcel classes; live-source snapshot retained
Kendall county clusters	110	2+ distinct LLCs and 2+ distinct parcels
Cook + Kendall partial-MSA clusters	3,627	Re-grouped across completed county adapters
Cross-county clusters	25	Same normalized owner-mail address appears in both counties
Mail-ready rows	0	Professional/service-provider and USPS gates not complete

7. File map

Folder	File	Purpose
00_MARKET_ADAPTER	Chicago_MSA_Market_Adapter_and_Execution_Status.docx	This control document
01_FINAL_OUTPUTS	cook_2026_candidate_mailing_addresses_RESEARCH_ONLY.csv	Candidate address clusters; explicitly not printable
02_SOURCE_DATA/00_BOUNDARY_REFERENCE	list1_2023.xlsx	Official Census/OMB county delineation
03_PROCESSED	cook_2026_llc_parcels.csv	Parcel-level LLC evidence
03_PROCESSED	cook_2026_address_clusters.csv	Address-level clusters and counts
03_PROCESSED	kendall_20260828_llc_parcels.csv	Kendall parcel-level LLC evidence
03_PROCESSED	chicago_msa_partial_cook_kendall_20260828_address_clusters.csv	Two-county normalized address clusters
04_REPORTS_AND_WORKBOOKS	Chicago_MSA_Source_Matrix_and_Data_Dictionary.xlsx	Scope, sources, fields, output columns and status
05_PIPELINE_CODE	build_cook_llc_clusters.py	Reproducible Cook API ingestion and grouping
06_DOCUMENTATION	README_Chicago_MSA.md	Human-readable folder map and run instructions
99_SUPPORT_FILES	builders and QA renders	Supporting scripts, previews and superseded documentation

8. Output columns and mailing gates

The parcel output preserves parcel_id, legal_owner_raw, legal_owner_normalized, owner mailing components, owner_mailing_address_key, situs components, source dataset ID and source row ID. The address-cluster output adds

distinct_llc_count, property_count, LLC and parcel evidence lists, service_provider_review, usps_cass_dpv_status and mailing_status.

Gate	Requirement
Legal owner	PASS only when normalized name ends in LLC
Cluster	PASS only at 2+ distinct LLCs and 2+ distinct parcels
Address provenance	PASS only when the key comes from owner-mail fields
Professional/service provider	Suppress lawyer, registered-agent, CPA/accountant, filing-service and C/O destinations
Collision/manual review	Review high-count addresses and ambiguous suites before automation
Postal	CASS/DPV deliverability and standardized address required
Deduplication	Exactly one outbound row per standardized mailing address
Print authorization	MAIL_READY only when every required gate is PASS

9. Next execution order

1. Complete Cook service-provider classification and evidence logging, starting with high-collision addresses.
2. Run USPS CASS/DPV and campaign suppressions; create the first true Cook mail-ready file only after validation.
3. Test DuPage REST fields and compare the authorized database-purchase option.
4. Request authorized bulk extracts for counties whose sites prohibit or do not support automated extraction.
5. Integrate each county into the same canonical schema, then deduplicate across county boundaries by standardized owner mailing address.
